

# Plant list city plants

Botanica GmbH • Industrie Nord 14 • 5643 Sins • Switzerland • www.botanica.ch • +41 41 757 00 00

The following list contains different urban plants that can grow well in cities and also deal with environmental pollution and pollutants. On average, biologists count over 1000 plant species in major cities. Including domestic plants, which actually grow in the countryside, and foreign plants, which originate from other countries and regions. The desire for green has been growing rapidly for years, which is great, because without plants the world would be a barren place. Especially in the city, we look forward to every corner, where it is green and flowers bloom.

Botanica processes the corresponding plants into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) - see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that some plants are not available all year round. Please ask us about the availability. This list is not exhaustive and represents only a part of our plants. If you are looking for specific extracts for your formulation, we are looking forward to your contact.
